

Knovista Technologies Lead Analysis Report

Rahul M Raju

May 23, 2026

1 Project Overview

This Power BI dashboard analyzes lead generation, marketing source effectiveness, employee performance, and time-series sales trends for Knovista Technologies. The objective is to identify the best-performing marketing channels, evaluate employee productivity, and understand seasonal business trends to support strategic decision-making.

2 Executive Summary

Metric	Value
Total Cost	45M
Total Leads	2M
Successful Conversions	845
Average Conversion Rate	40.17%
Number of Marketing Sources	6

Table 1: Overall Business KPIs

Conclusion: The organization generated a large volume of leads (2M), while maintaining a moderate conversion rate of 40.17%, indicating opportunities for performance optimization.

3 Marketing Source Analysis

3.1 Total Cost by Source

Conclusion:

- Instagram consumes the highest marketing budget.
- File Upload is the second largest contributor.
- Together, these two channels account for approximately 91% of total spend.

Recommendation: Reduce overdependence on a few channels and diversify marketing spend.

Source	Cost
Instagram	23M
File Upload	18M
Move Lead	3M
Facebook Ads	1M
Walk-in Lead	~0M
Neodove Dial Pad	~0M

Table 2: Cost Distribution Across Sources

3.2 Conversion Rate by Source

Source	Conversion Rate
File Upload	105.47%
Neodove Dial Pad	51.31%
Facebook Ads	42.54%
Instagram	39.94%
Walk-in Lead	27.67%
Move Lead	7.00%

Table 3: Conversion Efficiency by Source

Conclusion:

- Neodove Dial Pad is the most efficient source.
- Move Lead shows very poor performance.

Recommendation: Increase investment in efficient channels and reduce spending on underperforming ones.

4 Employee Performance Analysis

4.1 Top 5 Employees

1. Varsha A V – 52.80
2. Sneha Rajesh – 50.96
3. Ashna Sathar – 50.54
4. Hamza Anzar – 50.24
5. Viji – 50.11

Conclusion: These employees are the highest contributors and should be rewarded and retained.

4.2 Bottom 10 Employees

Lowest performer:

- Riswana – 28.84

Conclusion: A significant productivity gap exists among employees.

Recommendation: Implement training and improvement programs.

4.3 Sales Distribution

Revathy contributes approximately 33.13% of top employee sales.

Conclusion: Sales are concentrated among a few employees, reflecting the Pareto principle.

5 Time Series Analysis

5.1 Monthly Sales

- Highest Sales: June – 75K
- Lowest Sales: January – 2K

Conclusion: Strong seasonal trends exist in sales performance.

5.2 Monthly Cost

- June – 19.4M
- October – 14.9M

Conclusion: These are peak spending periods.

5.3 Monthly Conversion Rate

- Lowest: June – 5%
- Highest: Approximately 50% in multiple months

Important Insight: Despite the highest investment in June, conversion rate is the lowest, indicating major inefficiency.

Recommendation: Conduct a detailed audit of June campaigns.

6 Major Business Findings

6.1 Strengths

- Strong lead generation capability
- Multiple acquisition channels
- Top-performing employees identified

6.2 Challenges

- Budget overdependence on Instagram and File Upload
- Move Lead underperformance
- Large employee productivity gap
- Inefficient spending during June

7 Recommendations

1. Reallocate budget toward efficient sources like Neodove Dial Pad.
2. Reduce spend on low-performing channels.
3. Use top employees as mentors for others.
4. Audit poor-performing months such as June.
5. Add predictive analytics in future dashboard versions.

8 Final Conclusion

This dashboard effectively answers three major business questions:

- Which marketing source performs best?
- Which employees perform best?
- How does business performance change over time?

It provides strong actionable insights for strategic decision-making in marketing, HR, and operations.
